Catalan - Native

EDUCATION

3D Animation & VFX - La Salle Ramon Llull University (2023 - 2027)

3D Design Course - Mataro Tecno Campus (2019 - 2020)

Programming Course - Mataro Tecno Campus (2018 - 2019)

I am a 3D artist specializing in lighting, and digital compositing, with a strong understanding of the full production pipeline. I optimize workflows and adapt easily to collaborative environments, with experience in camera composition, visual storytelling, and lighting/rendering using multi-pass setups for efficient compositing.

WORK EXPERIENCE

DESAFÍO CHAMPIONS SENDOKAI

LIGHTING, RENDERING AND COMPOSITING (2026 - PRESENT)

Tasked with shaping the visual mood across several episodes, I developed master lighting setups that faithfully translated the directors' color keys into the 3D environment. A key focus was maintaining strict shot-to-shot consistency while preserving the show's signature friendly, cartoon aesthetic—characterized by vibrant colors, rich atmospheres, and strong rim lights. A major part of the process also involved managing the in-house render farm, maximizing its capacity, and actively troubleshooting render errors as they arose to keep production moving smoothly.

THE SCHOOL OF LIFE

Motion Graphics Animator (2024 - PRESENT)

I focused on narrative storytelling, with a strong emphasis on lighting, composition, and animation to create visually engaging and emotionally impactful sequences.

CGC ADVERSTING CAMPAIGN “NADA MAS QUE ZUMO”

Motion Graphics & Technical Production Artist (APRIL 2026)

Managed the technical production and motion design implementation for the campaign, crafting dynamic camera movements, transitions, and compositions that enhanced narrative flow and visual engagement.

PROJECTS

Shortfilm **“SINKRONY” (2025) - Layout, Lighting, Compositing**

Award Winner - 2nd Year Best Project

Lighting Lead responsible of final look and workflow optimization throughout the project. Developed master lighting setups for interior, exterior, and underwater sequences, creating an efficient pipeline for team-wide collaboration. Built custom tools for underwater lighting simulation and scene setup automation, reducing iteration times. Enhanced final compositions through volumetric effects and color grading, helping define the project's visual style and atmosphere.

Shortfilm **“STIGMA” (2026) - Lighting, Compositing Artist**

Collaborated on master lighting setups and several shots within a collaborative production pipeline, working closely with the team to receive and implement feedback throughout multiple iterations while ensuring lighting continuity, visual consistency, and coherence with the overall look and lighting direction across the differents sequences.
